

PDF CONVERTER

Converts your NonStop Server files to Adobe Acrobat PDF format.

PDF Converter is a part of the TIC Data.Flow product suite

Add PDF Features to your NonStop Files

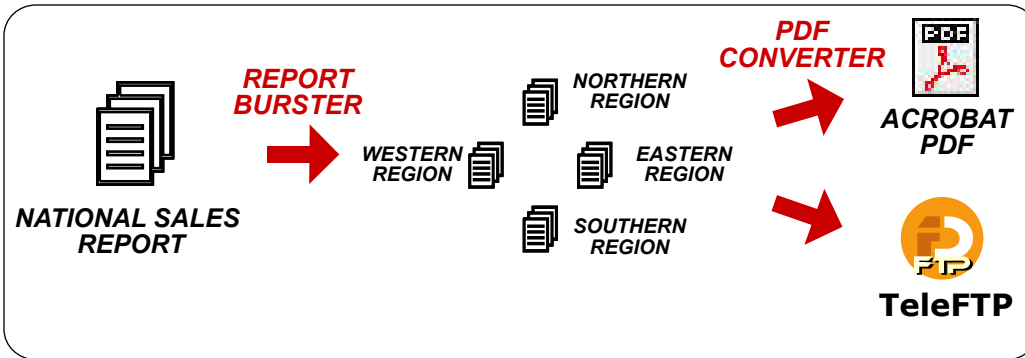

Now you can make your NonStop Server Reports available easily on the desktop or over Internet or Intranet. TIC's PDF Converter product takes NonStop Server Text Files and automatically converts them to Adobe Acrobat PDF format.

PDF documents can then be used on all different platforms which support Adobe Acrobat, such as Windows, MAC or Unix.

Convert your reports to PDF format and then archive them offline for later viewing anytime on the desktop via Adobe Acrobat.

Programmatic Interface enables converter to be invoked an Inter-Processing Communication (IPC) in addition to running in Command Line Mode

Additional options include conversion to HTML and ZIP format.

REPORT BURSTER

Automatic Report Splitting

Quite often, an application may generate a large report which encompasses information for different recipients. For example, a SALES REPORT may consist of sales information for multiple offices. This report usually needs to be separated into different sections manually or programmatically prior to distributing them to the individual offices.

This now can be automated with Report Burster from TIC. Report Burster allows you to define rules to scan through the Report data and segment them into different subreports automatically. For example, you can tell Report Burster to look at each page heading to determine the Office Location as the indicator for each subreport.

Report Buster also incorporates PDF Converter capability, which enables you to specify each segmented subreport to be converted to PDF documents after bursting. Optionally Report Burster can automatically invoke our **TeleFTP** product to transmit the converted reports to remote FTP site.

Key Features

- Convert NonStop Server Text Files to PDF format
- Configurable FONT selection such as Courier, Helvetica, or Times Roman
- Configurable FONT SIZE selection
- Compress mode supported
- Control output to be LANDSCAPE or PORTRAIT
- Configurable Lines Per Page Output

Specifications

- NonStop Server
- NSK D42 or later

Key Features

- Segment reports into subreports automatically
- Configurable rules to segment reports
- Flexible generated filenames
- Flexible configuration via XML commands
- Integrated with PDF Converter functions
- Optional integration with TeleFTP to automate transmission

Specifications

- NonStop Server
- NSK D42 or later
