## Data Transformation and Delivery

**TransForm** is a Windows-based data integration tool that provides an easy-to-use environment for all data conversion and delivery needs.

TransForm can accept input data from HP NonStop Server, Windows Server, Unix Server or other computing platforms in a variety of methods such as: FTP, SMTP, HTTP, or even simply a File Copy into a Monitored Directory.

Once the Input File is picked up, TransForm will perform any needed Format Conversion, including: PDF, HTML, or ZIP. The output file can then be delivered in different formats, including: FAX, Email, FTP, or Printer.

### Sample Applications

#### Health Care

Used for implementing Downtime Report System.

#### Financial Institutions

Automate file transfer to and from member firms

#### B2B

Automate transfer of invoice and orders with business portals

### Benefits

- Centralized server to perform data conversion and delivery.
