

TELEMAIL

TeleMail is a powerful Email-based report and document distribution system.

TeleMail is a part of the TIC Data.Flow product suite

Email Enable your Application Today!

TeleMail is a powerful Email based report and document distribution system that allows users to access information from any location via Internet Email. It can interface to any SMTP compatible Email systems, such as Microsoft Exchange Server or Lotus Notes.

TeleMail extracts information from NonStop data files or Spooler jobs and makes them into e-mail messages to be delivered to your Intranet or Internet Email as soon as the data is available.

TeleMail can send data either as Email message text, or as an PDF or PKZIP attachment.

Some benefits of using TeleMail over other products :

Guardian-based Solution

The TeleMail software runs on the NonStop, and requires no other external hardware or software. All the software components are built utilizing reliable NonStop technology that you are already familiar with.

Reliability

TeleMail delivers Email packages reliably, with log files accounting for every action and step taken.

High Performance

TeleMail is scalable, and enables you to configure any environment to support Email message volume in the thousands.

Support

Customers count on TIC support to give them quick responses to their questions and requests. When you need answers, TIC support is there to help you.

Proven

Customers have come to depend on TeleMail since 1996. It is a proven reliable product that have served mission-critical applications for many large corporations.

Some of our Customers :
