

TELEWEB

TeleWeb is a powerful web-based report and document distribution system.

TeleWeb is a part of the TIC Data.Flow product suite

Distribute Reports Instantly via the Web.

TeleWeb is a powerful web-based report and distribution system. It enables users to access information from anywhere, at any time, via a web browser.

TeleWeb extracts information from NSK data files or NonStop Server-Spooler jobs and makes them into reports to be viewed online as soon as the data is processed.

TeleWeb includes security features that protect the reports from inappropriate access. Its built-in Group and User feature provides password protection to access reports.

TeleWeb can distribute information in TEXT, PDF, or HTML format.

Some benefits of using TeleWeb over other products :

Guardian-based Solution

The TeleWeb software runs on the NonStop, and requires no other external hardware or software. All the software components are built utilizing reliable NSK technology that you are already familiar with.

Reliability

TeleWeb delivers reports reliably, with log files accounting for every action and step taken.

Efficiency

Teleweb stores one copy of the report to be viewed by selective group of users.

Support

Customers count on TIC support to give them quick responses to their questions and requests. When you need answers , TIC support is there to help you.

Proven

Customers have come to depend on TIC Portal since 1996. It is a reliable product that has served mission-critical applications for many large corporations.

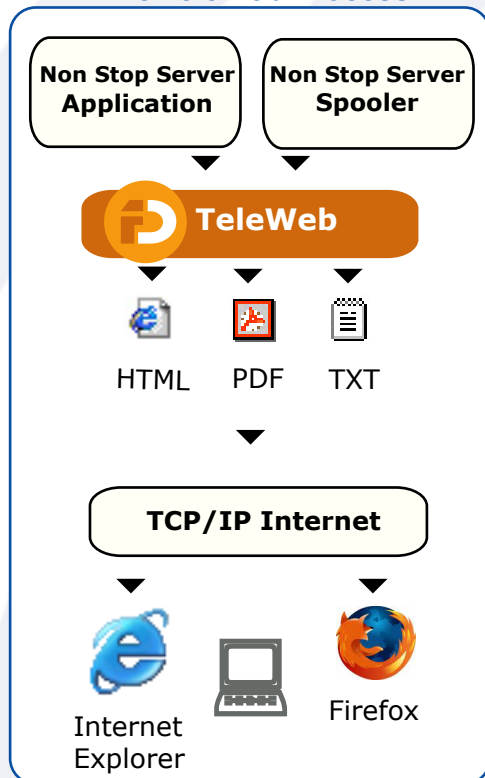

Key Features

- Generates reports from data files or NonStop Server Spooler Jobs for viewing and download on a browser which provides different view sizes, search capability, etc.
- Converts data into different data formats automatically:
 - .TXT : Simple text
